

Course Planning Worksheet

This simple worksheet assists faculty in planning the learning activities through which students will learn course learning outcomes, as well as the ungraded and graded assignments through which students will demonstrate their learning.

Course Learning Outcomes: What will students be able to do after successfully completing the course?	What learning activities (in-class work, assignments, readings, etc.) will support this outcome? How will students learn this?	How will students demonstrate that they've achieved this outcome? By what means will you assess how well students have learned this?
