

MORE INTELLIGENT...MORE SECURE

# Fastlane<sup>®</sup> Optical Turnstiles

ELEGANT LOBBY SECURITY

Smarter Security Systems has been marketing Fastlane Optical Turnstiles since 1992. With thousands of optical systems installed on 6 continents, Fastlane provides discreet, architect-inspired designs in the world's finest and most secure lobbies.

## HOW ARE FASTLANE TURNSTILES BETTER?

- **More Secure...** unsurpassed tailgate detection and bidirectional accuracy
- **More Intelligent...** faster speed means fewer lanes; practically eliminates false alarms
- **More Streamlined...** requires less lobby space
- **Better Looking...** end-users, architects and consultants concur
- **Less Expensive Installation...** low voltage and CAT5 interconnections
- **Better Value...** competitively priced, virtually maintenance free
- **Durable...** history of reliability
- **Counting Option...** highly accurate counting

## **FASTLANE BARRIER SAFETY**

Fastlane barriers are surrounded by more safety beams than most other turnstile brands have in their entire lane. Handicapped accessible models available.

## **FASTLANE GLASSWING™**

### **Classy Visual and Physical Deterrent**

GlassWing barriers are both visually imposing and physically deterring. Utilizing fast-acting retracting glass barriers in conjunction with advanced optical technology, GlassWing provides a high throughput security portal. For increased throughput speed, the wings can remain retracted when continual authorization is occurring. Available in standard and compact width models.

## **FASTLANE GLASSGATE™**

### **User Friendly Visual Deterrent**

Fastlane GlassGate's superior technology works in tandem with the panels' door-like motion for fast, user friendly operation. The tall, glass barriers act as a refined deterrent, uniquely breaking away in the direction of travel. Advanced infrared beam technology is programmed to catch anyone who tries to enter the open gate without authorization. GlassGate barriers uniquely break away in the direction of travel.

Unlike other glass barrier systems, GlassGate maintains a very streamlined profile, avoiding the need for extremely wide enclosures. Pedestals are only 6.4" wide as opposed to 20" or more. GlassGate easily blends into the fabric of lobbies, eliminating the 'mass transit' look and feel that others convey, with 55" l. x 38" h. dimensions. (glass h. 38", 47" or 60").

## **FASTLANE PLUS ENCLOSURES**

Fastlane Plus pedestals are brushed stainless steel with squared ends and Midnight Corian tops. Standard dimensions are 6.4" w. x 38" h with model lengths varying from 38" to 44". Customization options include Rounded, Wedged or Angled end designs and multiple countertop or enclosure materials.

## **FASTLANE PLUS 300MA**

### **Fast-acting Rigid Arm Design**

The Fastlane Plus 300MA is Fastlane's entry-level barrier solution. Value features include rigid arms to better impede unauthorized entry, and 1/4" tailgate detection.

## **FASTLANE PLUS 400 SERIES**

### **Self-Resetting Breakaway Arm Design**

The Fastlane Plus 400 series is feature rich, utilizing the greatest number of active infrared beams, and variable-tension barrier arms that break away in the direction of travel. The 400MA has mid-lane positioning for "Arms Normally Extended" operations, while the 400AS has asymmetric end-of-lane arm positioning which enables "Arms Normally Retracted" open lane operations.

## PEDESTRIAN COUNTING OPTION

In addition to leading the industry in tailgate detection, Fastlane can also provide incredibly accurate counting functionality. State Gaming officials have experienced nearly 100% accuracy... good news for the casinos too.

## FASTLANE COMPACT

Fastlane Compact™ is our most economical and streamlined model. The standard pedestal design is brushed stainless steel with squared ends and a Midnight Corian top. Customization options include rounded or wedged ends, various Corian countertops or enclosure finishes.

## FASTLANE CLEARSTYLE

ClearStyle™ has redefined the optical turnstile category with the most technically and visually chic design for high profile lobbies. Architects played a key role in this patented design of glasslike acrylic side panels and brushed stainless steel ends. End posts can be customized with various metals and finishes. ClearStyle blends right into the fabric of a building, delivering premium aesthetics and security.

## FASTLANE 4000T

The Fastlane 4000T is designed with the highest security and architectural flexibility in mind. For optimal non-barrier security, the 4000T configures the largest array of active infrared beams. It is also ideal to use in conjunction with the Fastlane Plus barrier arm turnstiles, since it has matching enclosures. The standard 4000T has squared ends, Midnight Corian tops and a brushed stainless steel enclosure. Customization options include a change of countertop and enclosure materials.

## FASTLANE DOOR DETECTIVE™

Fastlane Door Detective provides a unique solution to the threats posed by access controlled doors once they are opened. With an infrared field across the door opening, Door Detective detects tailgate and direction violations at access controlled doors. Designed to ignore objects other than people, Door Detective virtually eliminates false alarms.

That Door Detective wins comparative tests and regularly replaces other doorway detection products on the market is testament to its effectiveness and reliability. It is like having a guard at the door to protect your assets 24/7.

### FASTLANE PASSGATE/INTELLIGATE

The Fastlane Passgate line is designed for single or double glass panels to provide space (up to 78") for wheelchairs or carts. The panels are motorized, opening in both directions through either access control authorization or a push button at the guard's desk.

The Fastlane Intelligate is made for entrances with less supervision. Infrared beams are added to detect unauthorized tailgaters.

### FASTLANE TRIPOD

The Fastlane Tripod is specifically designed to operate in building interiors, in either motorized or non-motorized versions. The motorized version features an extremely

smooth and nearly silent operation as opposed to the required push and "click" of standard tripods. The architecturally inspired enclosures make minimal impact on the building design and the tripod can be combined with Fastlane Passgates to provide disabled access.

### VISITOR MANAGEMENT

Fastlane turnstiles offer a Visitor Management input that allows an unlimited number of people to enter the lane when activated. Once the visitors have passed through and the system no longer sees anyone entering or exiting, it "times out" and returns to its secure mode.

### DISABLED ACCESS

The Fastlane Entrance Control range has been designed to comply with most international disability regulations such as the USA ADA. All Fastlane systems can be configured to allow for wheelchair width lanes, plus the units feature audible and visual feedback for the hard of hearing and visually impaired. Fastlane Intelligates and Passgates are specifically designed for handicapped access that integrate well with standard Fastlane models. Please consult with us on how best to configure your lanes to allow disabled access for your particular product choice and space.

### ACCESSORIES AND OPTIONS

To simplify installation and operation.

### PEDESTRIAN COUNTING

Most Fastlane turnstile models can operate in a "counting only" mode or muster count in conjunction with the security operations. Counting status can be indicated with either a Fastlane digital display or Fastcount software with a PC interface.

### FASTLANE INFILL SYSTEM

The Fastlane Infill System is a series of decorative modular glass panels, which complement the Fastlane range by guiding users in the desired direction. This is available in both a fixed and free-standing version. (See Tripod photo.)

### FASTLANE REMOTE CONTROL

This desk mounted controller is designed to allow the guard to override some of the features of the Fastlane, facilitate visitor entry and to give a visual indication of alarms at the guard desk.

### FASTLANE FLOOR PROTECTOR

The Fastlane Floor Protector system is designed for temporary or architecturally sensitive installations and enables Fastlanes to be installed quickly and cost effectively, without drilling or otherwise damaging the floor.
